"3rd International Conference: Constructive Mathematical Analysis" is an activity of the journal Constructive Mathematical Analysis. The first two series of the event were organized as workshops. Based on the requests from international researchers studying on constructive mathematical analysis, this series will be organized as a conference.

The main goal of this conference is to promote, encourage, and provide a forum for the academic exchange of ideas and recent research works on any field of Analysis and Function Theory. The conference will present new results and future challenges, in a series of keynote lectures and contributed short talks.

The conference will be held in Konya located in the Central Anatolia region of Türkiye, where is the part of Cappadoccia region and very close to Mediterranean seaside.
The conference will form from the following sessions:

- S1: Positive Approximation Processes and Applications
- S2: Approximation by Sampling type Operators and Applications
- S3: Nonlinear Analysis, Fixed Point Theory and Applications
- S4: Fourier Analysis and Applications
- S5: Fractal Calculus and its Applications
- S6: All other topics in mathematics and statistics

The selected papers presented in ICCMA will be published in the special issues of the conference journals. We look forward to seeing you in ICCMA.
